# Branching

Pull Requests

# What Happens in the Real World

- We use Branches!
- Master is golden
- Must protect master
- Limit Merge Conflicts
- Backup code to cloud
- Allow Experimentation
- Facilitates Communication

Dobby is a free elf,  
and Dobby has  
come to save  
Source Code and  
his friends!

# Once more, with BRANCHES!

git clone or  
git pull origin Henry

git clone or  
git pull origin Tom

# Once more, with BRANCHES!

git push origin Henry

# Once more, with BRANCHES!

# Once more, with BRANCHES!

`git push origin Tom`

# Once more, with BRANCHES!

# Once more, with BRANCHES!

git pull origin master

Fix conflicts

# Once more, with BRANCHES!

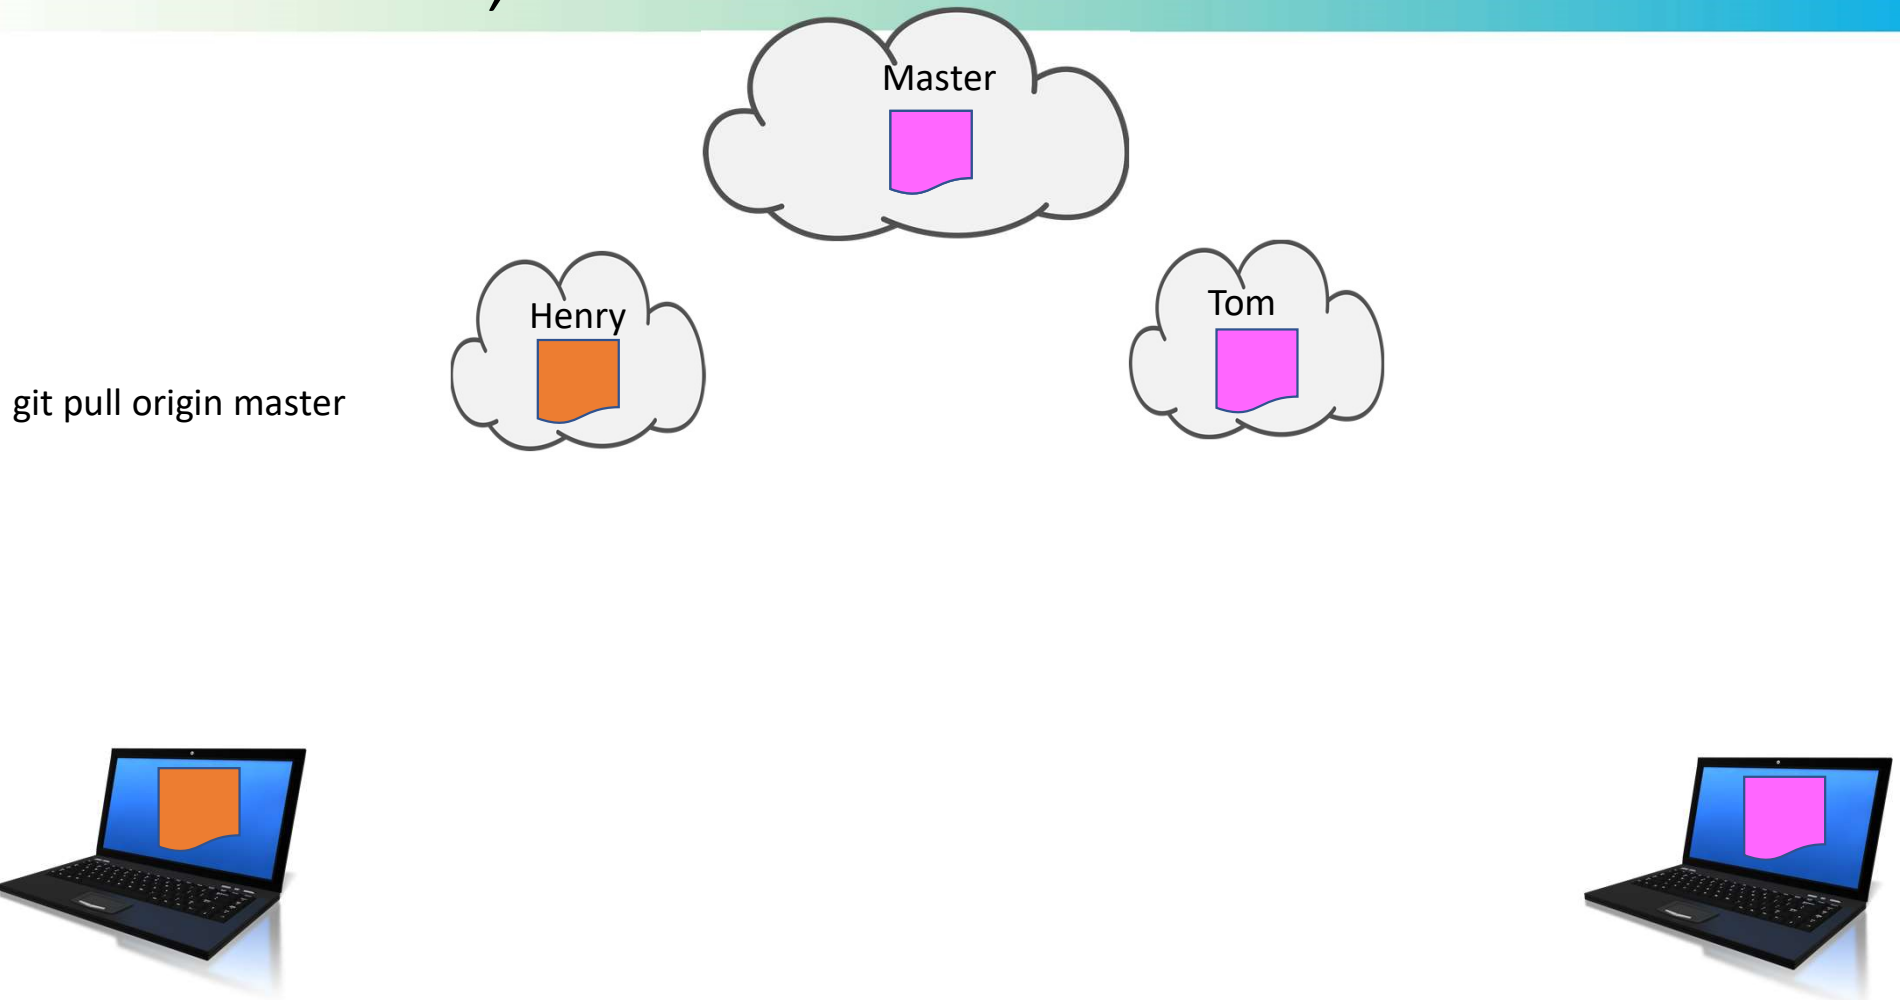

`git push origin Tom`

# Once more, with BRANCHES!

# Once more, with BRANCHES!

BRANCHING

ENGLISH, PLEASE

# Steps for Git with Branches

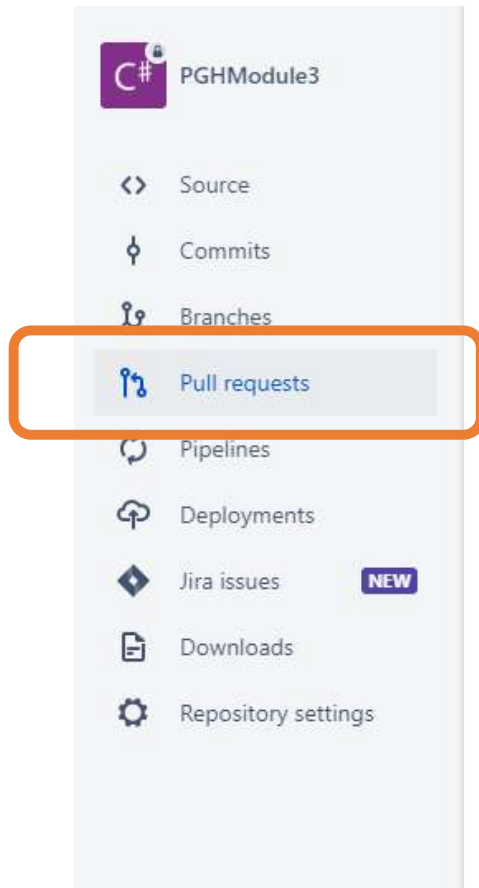

- ALWAYS WORK IN YOUR BRANCH

1. `git checkout TomAnderson`
2. Do your code.

- Usual git steps to commit code

1. `git status`
2. `git add -A`
3. `git commit -m "Cool code"`
4. `git pull origin TomAnderson`
5. `git push origin TomAnderson`

What would you like to say?

# Pull Requests – TomAnderson

- After pushing your WORKING code to your branch
- Click **Pull Requests** in Bitbucket
- Click **Create pull request**
- Choose **your branch** from the left and **master** from the right
- Click **Create pull request** at the bottom
- Notify your team/partner that there's a pull request

# Verifying a Pull Request – Henry Edwards

- First, commit/save your current work in your branch (don't want to lose anything)
- Change to the branch for the pull request
  - `git checkout TomAnderson`
  - `git pull origin TomAnderson`
- **VALIDATE THAT THE CODE WORKS AND DOES WITH IT SHOULD**
- Click Approve in BitBucket for the pull request (if above is true)
- Return to your branch
  - `git checkout HenryEdwards`
- Continue working on your code.

# Finishing Pull Request

- Tom Anderson
  - Click **Merge** in BitBucket Pull Request
  - Notify your team/partner the pull request has been merged
- Team/Partner
  - Verify you are in your branch
    - `git checkout HenryEdwards`
    - `git pull origin master`
- All done!

# If creating your Pull Request fails

- If there is a merge conflict between your branch and master
  - Pull master into your branch
    - `git checkout TomAnderson`
    - `git pull origin master`
  - Fix the merge conflicts.
  - `git status`
  - `git add -A`
  - `git commit -m "Cool code"`
  - `git pull origin TomAnderson`
  - `git push origin TomAnderson`
